

Sergei,

I hereby send you some information about our tourist attractions as asked by you.

You are wellcome to visit us to get firsthand info whenever you are in the vacinity.

Whe also discover some plant fossils of Glosopteris which can also been seen on the fossil trail.

The Mesosaurus is the eldest fossils ever found in Soutern Africa and is also found in Brazilië, which is evidence of the theory of the drifting of continents.

We get our information from the thesis of dr. Burger Oelofsen for his doctorate, which is available at the Gericke Library of the University of Stellenbosch.

Please contact me if you need more information.

My kind regards,

Giel Steenkamp.
